

Let me reminder it again. What you need to do for M3:

1. Comments for S3

The alarm feature report clearly shows screenshots of the frontend , backend and database showcasing the result from the development process. Although dedicated annotations aren't present for each screenshots, the screenshot are clear and well placed on the page . The report well illustrates the various achieved functions clearly giving a picture of the purpose of the overall feature with his functions . One of the weakness on the report is that although the functions of the Alarm feature are well talked about and the connection among the front-end, back-end and database is illustrated in good manner, the development process lack detail.

2. App description of your feature with screenshots

The diary feature is a simple note-taking software. The diary feature was designed to act as a digital writing tool to help students annotate and store all sorts of information, from personal blogs to secret passwords to remember. The feature is very intuitive and simple to use, it is designed as a form for simplicity and doesn't rely on other features to work. It has 2 textboxes one for the title of the page and one for its description (the content), 3 buttons one to add pages to the database, one to edit pages and one to delete pages, and 1 window to show all the pages currently stored in the database. The feature also accommodates night mode.

3. Sophistication(if you have)

4. Contribution justification

My contribution should be around the median of every member contribution because I was able to develop and complete my feature.

I also score fairly well on the individual submission ratings, demonstrating the effort I put in each part of the development process. I was also open to help with different task outside my main assignment the Diary feature.

5. Contribution score(I will count after I got your selection, check the pin)

If the contribution are divided equally my contribution score is around $100/6 = 16.6666666667 \approx 16.6$ considering that equal amount of work was distributed among 6 group members.

I finished all the task I had to complete, although I was supported when completing my typescript file, I didn't receive no exhaustive help or left my feature incomplete.

No contribution, the member should be given zero (0).	Very little contribution, not meaningful or substantial enough.	Equal work/Spilt of effort for all members in the group.	10% more contributions than other members of the group.	20% more contributions than other members of the group.	30% more contributions than other members of the group.	40% more contributions than other members of the group.	50% or more contributions than other members of the group.
---	---	--	---	---	---	---	--

6. Demo video of your feature(Do this after we all finish)

7. Demo video of your accessibility part(Do this after we all finish)

8. Meeting Diary(If you are free, plz help me finish it)
